INTRODUCTION

With the economy increasingly reliant on science, technology, engineering, and mathematics (STEM) and the anticipated large scale retirement of qualified teachers, pre-teaching preparation is essential to promote teacher-student success in and outside the classrooms.

In collaboration with STEM faculty members, several degree options with emphasis in science/ mathematics education were developed. These featured degree options include: environmental education (B.S.) geoscience education (BA), mathematics for secondary school teachers (B.S.), and physics education (B.S.). Each of these degree options provide a framework for guiding students interested in pursuing a career in secondary education. The degree options enable students to prepare for entrance into a teaching credential program, with a possibility of intern teaching. Because these degree options include core upper- and lower-division major courses, participating students gain comprehensive subject content knowledge, which facilitates effective lesson development for the classroom.

In addition, participating students are able to develop early teaching foundation, which includes early pedagogical training through field work and foundation education courses.
